MI-Server

Product

MI-Server is a high power, scalable enterprise server providing maximum long term performance and value. High performance, secure, and configurable server. The dual 20 Core-CPU provides redundancy in the event of failure. 786Gb of DDR4 error correcting memory supports a large number of Virtual Machines (VMs) and applications. The RAID array of Solid State Drives (SSDs) provides an integrated backup battery to improve performance and data retrieval without the risk of data loss. The server offers a fault tolerant system to ensure continuous up time in the worse case scenarios.

Cost: $39,501.81 each
