## MI Technical Solutions Participates in the VBCPS Career Immersion Event

*Block coding lessons utilizing Sphero BOLTs.*

**Chesapeake, VA February 24, 2026** – MI Technical Solutions (MITS) participated in the Virginia Beach City Public Schools (VBCPS) Career Immersion Event at the Virginia Beach Convention Center to provide hands-on experience in software development while discussing the company and its potential internship and career opportunities.

During the event, students utilized Sphero BOLTs to showcase their beginner level software development knowledge and critical thinking skills for our booth's challenge. (A Sphero BOLT is an app-enabled programmable coding robot in a sphere shape designed for beginner level coders. BOLTs can be a fun, useful tool to further bring to life the programming aspect of software development.) Each student was tasked to program different elements (such as speed, distance, and direction) for the robot to navigate while on their designated track. Additionally, students also needed to demonstrate their problem-solving and strategic thinking capabilities to successfully program their BOLT from start to finish. More than half of the students participating were able to complete the task successfully the first time. This experience provided beneficial hands-on experience in enhancing their block coding skillsets.

MITS continuously supports local community events to further invest in the next generation of professional leaders. We are grateful to the Virginia Beach Public Schools for hosting this event. We look forward to being able to support their future events!
