MI Technical Solutions Attends Fleet Maintenance & Modernization Symposium 2026

Virginia Beach VA, September 24, 2026 - MI Technical Solutions (MITS) was proud to attend the 2026 Fleet Maintenance & Modernization Symposium (FMMS), held September 22–24 at the Virginia Beach Convention Center.

Hosted by the American Society of Naval Engineers (ASNE), FMMS brought together leaders and professionals from across the Navy, Coast Guard, Marine Corps, Military Sealift Command, government, industry, and academia to discuss the technologies, challenges, and solutions shaping the future of fleet maintenance and modernization.

This year's theme, "From Foundry to Fleet: Delivering Readiness and Capability," provided an excellent backdrop for conversations focused on strengthening fleet readiness, improving maintenance and modernization efforts, and delivering innovative capabilities to the warfighter.

The MITS team appreciated the opportunity to connect with customers, industry partners, and fellow maritime professionals, exchange ideas, and gain valuable insight into the evolving needs of the Fleet. We look forward to building on the relationships and conversations from FMMS 2026 as we continue supporting our customers and the maritime community with innovative, mission-focused solutions.
