The Cube configured in Guam

The Cube Arrives in Guam for Testing

Guam, September 18, 2024 – The Cube, the first and smallest of MI Technical Solutions (MITS) Mobile Maintenance Connectivity Solutions (MMCS) family of products, arrived for customer testing in Guam. The MMCS product line was created to provide a scalable, robust, and rapidly deployable mobile connectivity to forward deployed operational areas with limited or degraded infrastructure. Having this capability increases Quality of Service (QoS) / Quality of Life (QoL) for maintenance teams.

The Cube itself provides a stable 120VAC hosting platform for a suite of networking and communications equipment housed within its 116 cubic feet of space. A 400-Watt solar backup, along with internal Uninterruptible Power Supply (UPS), provides redundancy in the event of power loss. It is easily configurable to meet a variety of customer requirements.

MI Technical Solutions continues to provide solutions deployable for our customer. Stay tuned for the next release of the MMCS product line!
